

What is claimed is:

1. A telecommunication infrastructure, comprising:
 - (a) a first electronic device, coupled to the telecommunication infrastructure;
 - (b) a second electronic device, coupled to the infrastructure, for providing a conversation representation; and,
 - (c) a processing device, coupled to the telecommunication infrastructure for storing 1) a conversation element associated with the conversation representation and 2) a software program for providing an audible utterance to the first electronic device in response to a selected conversation representation.
2. The telecommunication infrastructure of claim 1, wherein the second electronic device generates an in-band signal in response to a conversation representation selection.
3. The telecommunication infrastructure of claim 1, wherein the second electronic device generates an out-of-band signal in response to a conversation representation selection.
4. The telecommunication infrastructure of claim 2, wherein the signal is a Dual-Tone Multi Frequency ("DTMF") signal.

5. The telecommunications infrastructure of claim 1, wherein the conversation representation is selected from the group consisting of an icon, a symbol, a figure, a graph, a checkbox, a GUI widget and a graphics button.

6. The telecommunications infrastructure of claim 1, wherein the conversation representation is selected from the group consisting of a text and a label.

7. The telecommunication infrastructure of claim 1, wherein the conversation representation is text.

8. The telecommunication infrastructure of claim 1, wherein the conversation representation is a dedicated key.

9. The telecommunication infrastructure of claim 1, wherein the conversation representation is a key in a numeric keypad.

10. The telecommunication infrastructure of claim 1, wherein the first electronic device and second electronic device are mobile telephones.

11. The telecommunication infrastructure of claim 1, wherein the processing device is a computer coupled to the internet.

12. The telecommunication infrastructure of claim 1, wherein the processing device is a relay between the first electronic device and the second electronic device.

103 13. The telecommunication infrastructure of claim 1, wherein the processing device provides the audible utterance in a conference call.

14. The telecommunication infrastructure of claim 1, wherein the telecommunication infrastructure includes a wireless telephony application.

15. A telecommunication infrastructure, comprising:

- (a) a first electronic device, coupled to the telecommunication infrastructure; and,
- (b) a second electronic device, coupled to the infrastructure, for providing a conversation representation, and for storing 1) a conversation element associated with the conversation representation and 2) a software program for providing an audible utterance to the first electronic device in response to a selected conversation representation.
